New Button Installation

▶Connect new button hardware to the in cab diagnostic port. (JBUS, ECM, OBDII)

▶Start the truck. Check the button hardware has flashing LED on the face.

▶Turn on the mobile device's Bluetooth and WIFI features.

▶Log into the ELD application.

New Button Installation

Open the menu and select **Quick Set up**. Select **Get Started**.

- If this is the first time setting up a driver account, enter all required information.

New Button Installation

On the **Engine Connection** page tap the **Search for it** button. This will automatically search for and pair the button to the mobile device.

- If there is already a paired device ID from a previously connected button, tap the **Unpair and Pair with a new device** button. This will remove the previously connected devices.

New Button Installation

▶ Once the devices are paired continue through the Quick Setup and the device is ready to be used.

▶ A green indicator on the application will now display on the Home Page, indicating the device is now Connected to the Engine.
